

1) Number ranges

int $\rightarrow 10^9$

long long $\rightarrow 10^{18}$

2) Input

cin >> str $\rightarrow$ breaks at space

for input like "I am Priyansh" use:

getline(cin, str);

getline breaks at '\n' (Enter)

3) Address of a variable

To get the address of a variable: &num

4) Function arguments

Pass by value : fun(int x)

Pass by reference : fun(int &x)

5) Arrays

In functions, array parameters behave like pointers, so changes affect the original array.
